

NABEEHA AYAZ

Karachi, Pakistan | 03372109487 | nabeehaayaz190@gmail.com

PROFESSIONAL SUMMARY

Final-year Software Engineering student at UIT University with hands-on experience in Java, full-stack web development, databases, and AI/ML projects. Skilled in building responsive web applications, applying object-oriented programming, and developing AI/ML system solutions. Seeking an entry level role to contribute to practical software projects while growing within a professional team.

EDUCATION

UIT University <i>Bachelor of Software Engineering</i>	2026 Karachi
Govt. Degree Science & Commerce College <i>HSSC (Pre-Engineering)</i>	2021 Karachi
Beacon Askari Secondary School <i>SSC</i>	2019 Karachi

TECHNICAL SKILLS

Languages: Java, Python, PHP, JavaScript, SQL, HTML5, CSS3
Frameworks & Web: Angular, Bootstrap, REST APIs, JSON, Responsive Web Design
Databases: MySQL, PostgreSQL
AI/ML: TensorFlow, scikit-learn, CNNs, Pandas, NumPy, supervised learning
Tools & Methods: VS Code, XAMPP, Git, Agile, Object-Oriented Programming (OOP)

PROJECTS

Movie Recommendation System | Java, OOP

- Developed a Java-based movie recommendation application using object-oriented programming concepts such as classes, inheritance, encapsulation, and polymorphism.
- Organized movie, user, rating, and recommendation logic into reusable modules for easier maintenance and extension.
- Generated recommendations based on user-selected genres, preferences, and movie ratings.

Restaurant Management System | PHP, MySQL, HTML, CSS, JavaScript

- Built a web-based restaurant management system for menu management, table reservations, order processing, and billing.
- Implemented role-based access for administrator, waiter, and kitchen staff using PHP sessions and secure database queries.
- Designed a responsive interface for managing orders and viewing order-status updates.

Pet Image Classifier | Python, TensorFlow, CNN

- Trained a Convolutional Neural Network to classify pet images across multiple categories using an image dataset.
- Applied image preprocessing and data augmentation techniques such as rotation, flipping, and zooming to improve generalization.
- Evaluated model performance using training and validation metrics.

Arduino-Based Door Lock System | Arduino

- Developed a smart door lock system using Arduino to control secure access through an electronic locking mechanism.
- Integrated keypad for user authentication and programmed access-control logic in the Arduino IDE.
- Used indicators such as LEDs and a buzzer to provide successful-access and denied-access alerts.

Teacher Assist - Final Year Project | Angular, Python, PostgreSQL, AI

- Developed an AI-powered academic assistant platform that supports assessment generation, OBE-related workflows, gap analysis, and academic document transformation.
- Built the frontend in Angular and integrated it with a Python-based backend through RESTful APIs.
- Designed PostgreSQL data structures for users, students, assessments, marksheets, and generated academic content.
- Implemented features for teachers and academic management, including progress tracking and automated academic assistance.
